SOIT: A LEGACY OF INNOVATION AND EXCELLENCE

The School of Information Technology (SoIT) was established with a visionary goal: to bridge the gap between traditional education and the rapidly evolving digital landscape. The institution was built on a commitment to technical rigor and forward-thinking research.

The hallmark of this institution has always been its "Hands-on" philosophy.

Since its inception, SOIT has moved beyond the chalkboard, encouraging students to experiment, fail, and innovate.

Our history is not just written in textbooks, but in the thousands of lines of code, research papers, and patents produced within these halls.

As we celebrate another year, we reflect on our origins not just as a timeline of dates, but as a foundation of values. Today, SOIT stands as a premier hub for technical education, continuing to produce the architects of the digital age who carry forward the legacy of excellence established years ago.

LEADING OUR LEGACY: VICE CHANCELLOR'S MESSAGE

As Vice Chancellor, I have always maintained that a premier technical institution is defined not just by its infrastructure, but by its intellectual ecosystem. A magazine like BODHIKA serves as a vital barometer of this ecosystem. In the rapidly evolving landscape of Information Technology, the ability to articulate complex ideas, document creative solutions, and engage in critical reflection is what distinguishes a mere technician from a true leader in the field.

I appreciate the meticulous efforts of the Director, the editorial team, and the faculty of SOIT for creating this platform. It takes a unique blend of discipline and creativity to curate a publication that balances technical rigor with literary flair.

At RGPV, our vision is to stay ahead of the curve, and BODHIKA is a reflection of that forward-thinking spirit. I encourage every student to view this magazine as their own, a space to challenge existing paradigms and propose visionary ideas. I am confident that in the years to follow, this publication will become a legacy of our institution's excellence and a source of inspiration for the entire university.

Warm Regards,
Prof. Alok Sharma

It is a moment of significant academic milestone for the School of Information Technology (SOIT), RGPV, as we unveil the maiden issue of our college magazine, "BODHIKA."

While the name itself signifies the light of knowledge and intellectual awakening, this publication represents something even more tangible: the transition of our students from passive learners to active contributors to the global discourse on technology and innovation.

DEFINING SUCCESS: DIRECTOR'S MESSAGE

I wholeheartedly appreciate the dedicated efforts of the editorial team, faculty coordinators, and students who have worked tirelessly to bring this vision into reality. Their commitment and enthusiasm have transformed this idea into a meaningful publication that will inspire many more contributions in the years to come.

As Director, I believe that such initiatives strengthen academic culture and foster a sense of unity and pride within the institution. Education is not confined to classrooms alone; it flourishes through dialogue, creativity, and reflection. I am confident that BODHIKA will continue to grow in quality and stature with each edition, inspiring future generations to dream big and achieve excellence. May it encourage critical thinking, creativity, and constructive dialogue among all members of our institution.

I extend my best wishes to the entire college family for this remarkable achievement and look forward to many more successful editions in the future.

With warm regards,
Dr. Jitendra Agrawal

It is a matter of immense pride and joy to present the inaugural issue of our college magazine, "BODHIKA". The word Bodhika is derived from the Sanskrit root "Bodh" which means knowledge, awareness, awakening, and enlightenment. Thus, BODHIKA signifies "that which enlightens" or "a source of knowledge and intellectual awakening." This profound meaning beautifully reflects the vision and academic spirit of our institution.

A college magazine is not merely a collection of articles; it is a reflection of the intellectual vibrancy, creativity, and diverse talents of our students and faculty. It provides a platform for young minds to express their thoughts, showcase their literary and artistic abilities, and share innovative ideas with the academic community.

BLUEPRINT OF SUCCESS!

In this transformative era of digital innovation, where information technology underpins virtually every facet of modern society from modern warfare, healthcare and finance to governance and beyond, our School steadfastly nurtures graduates poised to lead with unparalleled distinction, embodying swadeshi principles of self-reliant indigenous innovation and contributing decisively to the ambitious vision of Viksit Bharat @2047—a developed India by 2047. As a senior professor with over three decades of extensive experience in academia, pioneering research, and strategic collaborations, I take immense pride in witnessing the intellectual rigor, entrepreneurial spirit, self-employment aspirations, and patriotic zeal exemplified by students pursuing advanced studies in critical domains such as data science, business systems, artificial intelligence (AI), machine learning (ML), and cybersecurity.

The robust curriculum of our school empowers you not only to master foundational knowledge but also to harness AI and ML for predictive modeling in business systems, apply data science to derive actionable insights from expansive datasets, deploy fortified security measures against sophisticated cyber threats, and pioneer swadeshi startups that leverage local talent and resources to propel Viksit Bharat @2047 initiatives in smart cities, sustainable agriculture, modern war technologies, space science and digital governance. I earnestly urge you to cultivate a robust entrepreneurial mindset by launching self-employment ventures through university incubators, undertaking interdisciplinary research projects that blend theoretical excellence with practical swadeshi applications aligned to national goals,

upholding impeccable ethical standards amid rapid technological shifts, and actively networking in global forums to amplify India's indigenous technological prowess.

Your visionary endeavors in self-employment, entrepreneurship, and swadeshi innovation will be instrumental in realizing Viksit Bharat @2047. Persist with unwavering resilience, innovate ceaselessly, and architect a secure, intelligent, self-reliant future for our nation.

With profound regards,
Prof. Sanjeev Sharma

EMPOWERING YOUNG MINDS

The core mission of our endeavours has always been the empowerment of young minds. We have the unique privilege of overseeing the systems and structures designed to support students from the moment you join our community until the day you step across the stage at graduation.

Empowerment is not merely about the transfer of information; it is about providing you with the tools to question, to innovate, and to lead. We believe that true education happens when academic rigor is matched by personal growth. Our goal is to ensure that your time here is defined by a seamless integration of world-class learning and a nurturing progressive environment.

Dear students, you are at a pivotal stage of your lives. We are committed to fostering a campus culture that encourages you to take intellectual risks. Empowerment comes through discipline, curiosity, and the courage to pursue your goals even in the face of challenges. We take great pride in maintaining an institution where transparency, efficiency, and student-centered service are the priorities.

With warm regards,
Dr. Nishchol Mishra

MAPPING YOUR CAREER PATH: HEAR FROM OUR TNP HEAD

The transition from a student to a professional is one of the most significant milestones in an individual's life, and at its core, this journey requires a carefully charted map rather than a random pursuit of opportunities. Career mapping is not simply about securing a job; it is a strategic process of aligning your unique strengths, passions, and academic foundations with the evolving needs of the global industry. In today's competitive landscape, the path to a successful career is rarely a straight line; it requires the agility to navigate new technologies and the foresight to identify emerging trends before they become the norm. Our role at the Training and Placement Cell is to act as your navigators, providing the compass of industry insights and the tools of skill-building, but the direction you choose remains a personal commitment to your own growth. We believe that true career empowerment comes from a combination of technical proficiency and soft-skill mastery—the ability to communicate ideas, lead with empathy, and solve problems with a critical mind.

As you begin to map your own professional trajectory, I encourage you to look beyond the immediate horizon and focus on building a sustainable career path that offers both personal fulfillment and the opportunity to make a meaningful impact on the world. Your career is a marathon of continuous learning, and with a well-drafted map, there is no limit to the heights you can reach.

Dr. Shikha Agrawal

CROSSING THE T'S AND DOTTING THE I'S: WHAT OUR EDITOR SAYS?

मंज़िल मिलेगी,
भटक कर ही सही,
गुमराह तो वो है
जो घर से निकले ही नहीं।

With Love,
Oorja Jain

Tomorrow I'll wake up and choose myself.
Tomorrow I'll let go of the past that haunts me.
Tomorrow I'll be happy...finally, happy.
But I'll never see tomorrow. Tomorrow is a myth,
A myth I work my entire life for, a myth that
doesn't let me pause for even a second, a myth
that doesn't let me send that resignation mail.

Tomorrow keeps you tied to this labyrinth of suffering. But there is a way out. The poets, artists and romantics; the people who think beyond school, job and money, those are the ones who break free from this cycle of existence and live their today like the tomorrow we are excited about.

This Magazine is an attempt to capture and encourage all those artists in hiding; an attempt to look beyond the academics and document the talent that breathes beneath the mask of profession and robotic livelihood; an attempt to stop existing and start living.

BLOGOSPHERE :

WHAT'S TRENDING ON CAMPUS

The Student Voice: Unfiltered & Unlocked

Welcome to the Blogosphere! More than just a collection of articles, this is the dynamic space where the authentic, unfiltered voices of our university students come alive. From navigating the confusing world of semester exams and securing that first internship, to decoding campus fashion trends and finding the best late-night hangouts—our writers have covered it all. Dive into these pages to get the real pulse of what our community is thinking, debating, and creating.

WORDS OF WISDOM

Engineers do more than fix problems—they create new possibilities. When you design, build, or code, let your curiosity lead the way, because even a small idea can grow into something big. Use your creativity like energy, stay determined, keep asking questions, and keep learning. With courage and effort, your work can truly make a difference in the world.

Ms. Anushka Singh

स्क्रीन टाइम

आधुनिक युग में तकनीक हमारे जीवन का अभिन्न अंग बन चुकी है। मोबाइल फोन, कंप्यूटर, इंटरनेट और सोशल मीडिया ने पढ़ाई को आसान बनाया है, लेकिन इसके अत्यधिक उपयोग से कई नुकसान भी सामने आए हैं, विशेष रूप से विद्यार्थियों के लिए। उन्हें अक्सर मोबाइल की स्क्रीन पर समय बिताना अच्छा लगता है। मोबाइल गेम्स, सोशल मीडिया और वीडियो देखने में समय नष्ट होता है, जिससे पढ़ाई पर ध्यान कम हो जाता है। इससे परीक्षा के परिणाम भी प्रभावित होते हैं।

अधिक समय तक मोबाइल और कंप्यूटर का उपयोग करने से आँखों में दर्द, सिरदर्द और नींद की समस्या होने लगती है। तकनीक के अधिक प्रयोग से विद्यार्थियों की सोचने और कल्पना करने की क्षमता कम हो रही है। वे हर जानकारी के लिए इंटरनेट पर निर्भर हो जाते हैं, जिससे उनकी रचनात्मकता और आत्मनिर्भरता घटती है।

इसके अलावा, तकनीक के कारण सामाजिक संबंध भी कमजोर हो रहे हैं। विद्यार्थी परिवार और मित्रों के साथ समय बिताने के बजाय स्क्रीन के सामने अधिक समय बिताते हैं, जिससे उनमें अकेलापन बढ़ सकता है।

अतः यह आवश्यक है कि विद्यार्थी तकनीक का उपयोग सीमित और सही तरीके से करें। तकनीक एक उपयोगी साधन है, लेकिन उसका दुरुपयोग विद्यार्थियों के भविष्य के लिए हानिकारक हो सकता है।

Mr. Mahendra k. Ahirwar

Those who are powerful tilt rules in their own favour;
what may appear
to be attractive at the first sight may be harmful ultimately;
instead of rectifying ourselves we keep maligning others; dominants do not allow others' potential to fructify; many are engaged in exhibiting hollow sympathy; some are confined to secluded megalomania; some remain stagnant due to preference for security and passive peace; some love being garrulous fighters;
some breathe false vanity and keep suffering from a superiority complex; some prove their points by being abrasive and unkind to others; some are glued in greed; some are captivated by hypocrisy so that their help harms others;
some take being a workaholic as a virtue; some want to achieve the goal without paying a price; some are in the business of exploiting others; some are continuously engaged in self-aggrandizement and so on.

WHAT YOU BELIEVE YOU BECOME

"Students you are much more than what you think you are and most important you can achieve much more than what you are achieving now."

Mrs. Swati Patel

"शिक्षा की जड़ें कड़वी होती हैं लेकिन फल मीठा होता है।"

The roots of education can be bitter, but the result is always sweet.

Ms. Rachna Nagdev

WORDS OF WISDOM

"In life, in the race of achieving innumerable milestones, we forget to stay grounded to our happy states. Along with working on yourself, learn to prioritise your happiness and peace of mind. To have a life is one thing, and to be able to live it fully, is another. Choose to live life, happily, honestly, beautifully".

-Ms. Aashi Chaturvedi

Dear Students,

Success is not defined by grades alone but by the curiosity you carry, the values you uphold, and the resilience you build. In a rapidly changing world, learning is no longer limited to classrooms every challenge, failure, and experience is a silent teacher shaping your future.

Stay passionate, stay disciplined, and continue questioning. Believe in yourself even when others doubt you. Let integrity guide your actions and compassion guide your decisions.

Remember, knowledge becomes powerful only when you apply it for growth both personal and societal. Aim not just to make a career, but to make a difference.

Wishing you strength, wisdom, and the courage to dream beyond boundaries.

Gajendra Kumar Ahirwar

कुछ अपने मन का

लोगों को आपके कारण परेशान ना होना पड़े इसलिए अपने आप को स्वस्थ रखिए, मन को संयमित रखिए ताकि मन के बहकावे मे आप से कुछ गलत ना हो ,अपने विचारों को पवित्र रखिए ताकि लोग आपको देखकर सन्मार्ग पर चलने को प्रेरित हो , हृदय को परोपकार से भरा रखिए जिससे सब आपको अपना समझे , बुद्धि की समझ ऐसी विकसित कीजिए कि वह लोगों की भलाई का सोचे ना कि लोगों को नीचा दिखाने का ,खुद के लिए भले कठोर रहिए मगर अपने अधीनस्थ और आश्रितों के प्रति नमी बरते ,अपने को जैसा भी रखे समय का मान जरूर रखिए , यह लौटकर वापस नहीं आएगा।जिसके लिए मनुष्य जन्म लिया है उसे ऊंचे उद्देश्यों की पूर्ति में लगाकर सार्थक कीजिए । स्वार्थ में नहीं परमार्थ में ही जीवन की सार्थकता है । प्रकृति ने ऐसा विधान बना रखा है कि मांगने वाले को कुछ मिले ना मिले बिन चाहत के जीने वाले को वह बिन मांगे सब दे देती है ।वह सचमुच भाग्यशाली होते है , जिन्हें सब कुछ देने वाले परमात्मा से प्रेम होता है , फिर उस प्रेम को श्रद्धा कहे या विश्वास बात एक ही है। बाते बहुत सी है किन्तु अपना जीवन शिक्षा जगत से जुड़ा है तो हम छात्रों के जीवन में भी लगातार इन्ही बातों को अपनाने,अच्छे संस्कार , अपनों के लिए और समाज के लिए कुछ कर गुजरने का जज्बा हो इसके लिए हमेशा मार्गदर्शन देने का प्रयास करते है और करते रहेंगे इन्ही आशाओं के साथ..... बहुत बहुत धन्यवाद

Dr. Mahesh Shankar Pandey

HOW I CRACKED THE CODE :

My Playbook for Winning Hackathons

~Aryan Patil (CSBS) 2nd Year

Hey everyone, I'm Aryan Patil, and after participating in more than 20 hackathons and ideathons, I've finally understood what it actually takes to win these competitions. Over this journey, I've been fortunate to secure multiple podium finishes, including 1st Runner-Up at the IIIT Bhopal Hackathon (2024), 1st Runner-Up at Imprenditore RGPV (2025) in Entrepreneurship, 2nd Runner-Up at Pitch to Elevate (2025) in Startup Pitching, Winner at IEHE Pravaah (2025) and 1st Runner-Up in Creative Writing for Songwriting at MANIT Bhopal (2024). These achievements didn't happen overnight; each event taught me something new about teamwork, problem-solving, presenting ideas, and staying confident under pressure. Today, I'm sharing all my experiences, tips, and the exact mindset that helped me grow through these competitions.

Before understanding hackathons, it's important to understand how an idea actually evolves into a startup, because this helps you clearly differentiate between a hackathon and an ideathon. Every startup journey begins with spotting a problem in society. Once you identify that problem, you conduct research, surveys, and user interviews to understand it deeply. Only then you develop an innovative solution, which can be software, hardware, or a mix of both.

After that comes the MVP—your Minimum Viable Product (prototype) which you test on a small scale to gather feedback. Based on this feedback, you analyze whether your concept is useful, scalable, and functional. If it works, you expand it; if it doesn't, you pivot. Interestingly, almost 90% of startup ideas collapse at this point because they fail to understand user needs.

Now, compare this with a hackathon. In a typical hackathon, organizers provide problem statements, or sometimes you're free to propose your own. You research the problem, create an innovative solution, and submit a pitch deck in PPT or PDF format. If this pitch gets shortlisted, you move to the next round where you build a prototype and present it to judges. Some hackathons include live coding rounds,

Finding hackathons is easier than people think. The best way is to follow top colleges, their E-Cells, innovation clubs, and their Instagram, LinkedIn, or YouTube pages. Another reliable way is regularly checking platforms like Unstop, Devfolio, and HackerEarth. Once you enter these competitions, building the right team becomes the most important step. A strong team must have complementary skills—developers to build the software, a designer to create UI and make the pitch visually appealing, and a presenter who can confidently explain everything to the judges. A well-balanced team performs better than a team that relies only on one skill set. Next comes creating your PPT and presentation. Your pitch deck must be visually appealing, structured, and easy to understand. On the presentation day, your first goal should be grabbing attention through a strong hook—maybe a shocking fact, a relatable question, or a small humorous moment. Once you have the room's attention, explain the current market situation, highlight the problem, and then move smoothly into your solution. The Q&A; round is where many teams struggle, so stay confident and prepared. If possible, demonstrate a working prototype, because when judges see your idea in action, they ask fewer questions and understand your vision clearly. whereas in ideathons, prototypes are optional but extremely helpful for idea explanation. Depending on the organizers, these events can have anywhere from two to six filtration stages.

Finding hackathons is easier than people think. The best way is to follow top colleges, their E-Cells, innovation clubs, and their Instagram, LinkedIn, or YouTube pages. Another reliable way is regularly checking platforms like Unstop, Devfolio, and HackerEarth. Once you enter these competitions, building the right team becomes the most important step. A strong team must have complementary skills—developers to build the software, a designer to create UI and make the pitch visually appealing, and a presenter who can confidently explain everything to the judges. The Q&A; round is where many teams struggle, so stay confident and prepared. If possible, demonstrate a working prototype, because when judges see your idea in action, they ask fewer questions and understand your vision clearly.

Apoorva Kanere

Judges generally look for innovation, feasibility, scalability, clarity of thought, and team collaboration. They also appreciate ideas that are simple yet impactful. A working prototype always increases your chances of winning because it proves that you didn't stop at thinking—you executed. A question I get a lot is whether coding experience is required to join a hackathon. My answer is no. I participated in most of my hackathons without strong coding skills, yet I reached the final rounds and even won runner-up positions multiple times. My strengths were idea generation, leadership, business planning, team management, and design. Hackathons are not only about coding; they're about collaboration and creativity. My journey through the MANIT and IIIT Bhopal ideathons taught me even more. IIIT's ideathon lasted two months, had multiple rounds, and featured deep, meaningful questions from judges. It also gave us huge publicity—we were featured in seven newspapers. MANIT's ideathon was quicker, with fewer rounds but a diverse set of participants from various colleges. Both events helped me understand different judging styles, competition structures, and expectations. Looking back, every hackathon—whether I won or not—taught me something valuable. They pushed me to think deeper, present better, and work faster. With 20+ hackathons behind me and multiple runner-up titles across entrepreneurship, startup pitching, and even creative writing, I feel more confident than ever about tackling new challenges. If you're thinking about joining a hackathon, don't wait for perfect skills or the right moment. Just dive in. The learning you gain is far more valuable than the award itself. Thanks for reading, and as always “keep the hunger alive.

FRIENDSHIPS, FAILURES & FIRSTS: The Real College Story

~कुन्दन भारती (CSE-AIML) 4th Year

कॉलेज... शब्द छोटा है, पर अनुभव बहुत बड़े। जब हम पहले दिन कैम्पस के गेट से अंदर जाते हैं, तो कोई नहीं बताता कि यहाँ सिर्फ क्लासेज़ और असाइनमेंट्स नहीं होते यहाँ दोस्ती, असफलताएँ और वो "पहली पहली" चीज़ें होती हैं जो हमें हमेशा के लिए बदल देती हैं। कॉलेज हमें किताबों की जानकारी से ज़्यादा ज़िंदगी की असली ट्रेनिंग देता है।

वो दोस्तियाँ, जो परिवार बन जाती हैं

कॉलेज में मिलने वाले दोस्त अक्सर हमारे 'डिफॉल्ट सपोर्ट सिस्टम' बन जाते हैं। ये वही लोग होते हैं जो सुबह 9 बजे वाली क्लास के लिए हमें उठाकर ले जाएँ, प्रॉक्सी लगाएँ, और कभी-कभी खुद फेल होकर भी हमें पास करवाने की कोशिश करें।

शायद यही वो जगह है जहाँ हम पहली बार किसी को परिवार की तरह ट्रीट करना सीखते हैं - बिना रिश्तों की परिभाषा के बिना किसी उम्मीद के ये दोस्तियाँ कभी लाइब्रेरी के साइलेंट ज़ोन में बन जाती हैं, कभी कैटीन की चाय पर और कभी किसी इंजीनियरिंग प्रोजेक्ट के साथ काम करते हुए।

**"ज़िंदगी की राहों में जब सही हमसफ़र मिल जाते हैं,
तो मुश्किलें भी मुस्कुराकर रास्ता दे जाती हैं।"**

वो असफलताएँ, जिनकी ज़रूरत हमें पहले पता नहीं थी

स्कूल तक तो हम असफल होने से डरते थे। कॉलेज में आकर हम सच में "फेल होना" सीख जाते हैं - एग्जाम, प्रोजेक्ट्स, इंटरनशिप्स या ज़िंदगी के किसी अनुभव में। धीरे-धीरे ये failure टैग हमें अपना सा लगने लगता है। और यही असफलताएँ हमें सबसे ज़्यादा बढ़ाती हैं। कभी किसी सब्जेक्ट में बैक लग जाना, तो कभी किसी प्रतियोगिता में जीत का सपना अधूरा रह जाना। लेकिन समय के साथ समझ आता है फेल होना हमारा रुकने का संकेत नहीं, बल्कि दिशा दिखाने वाला बोर्ड है। कॉलेज सिखाता है कि उपलब्धि से ज़्यादा ज़रूरी **निरंतरता** होती है। और हर गिरावट के बाद खुद को संभाल लेना ही **परिपक्वता का पहला कदम** होता है।

वो "पहली बार", जो हमेशा याद रहते हैं

कॉलेज 'पहली बार' से भरा होता है-

- पहली सोलो प्रेजेंटेशन
- पहला ग्रुप प्रोजेक्ट फाइट
- पहली रिजेक्शन
- पहली सच्ची तारीफ़
- पहली बार आत्मविश्वास महसूस होना
- पहला करीबी दोस्त
- और कभी-कभी... पहला Heartbreak

हर "पहली बार" के साथ हम थोड़े नर्वस थोड़े एक्साइटेड, और शायद बहुत ज़्यादा इंसान बन जाते हैं। यही "firsts" हमें पहला डर भी देते हैं, और पहली हिम्मत भी हमें पहली बार अपने comfort zone से बाहर निकलकर खुद को परखते हैं हम अपनी सोच से **ज़्यादा सक्षम** हैं।

The real college story क्लासरूम में नहीं - हममें लिखी जाती है

मज़ेदार बात यह है कि हम कॉलेज में इंजीनियरिंग या कोर सब्जेक्ट पढ़ने आते हैं, पर असल में सीखते हैं।

- दबाव संभालना
- लोगों को समझना • खुद को सेट करना
- समय का प्रबंधन
- टीमवर्क
- नेतृत्व
- आत्मविश्वास
- निर्णय क्षमता
- और असली दुनिया में जीने का तरीका

कॉलेज के ये चार साल हमें चुपचाप, खूबसूरती से **रियल लाइफ़ के लिए तैयार कर देते हैं।**

ये साल हमारी सोच से ज़्यादा मायने रखते हैं

कभी-कभी हम अपनी व्यस्त दिनचर्या में इतने खो जाते हैं कि महसूस ही नहीं कर पाते कि यही वो समय है जो ज़िंदगी में दोबारा नहीं आएगा। कैटीन का आलू पराठा, होस्टल की लेट- नाइट बातें, फेस्ट की धूम, एग्जाम से एक रात पहले का पैनिक - यह सब एक दिन सिर्फ यादें बन जाती हैं। और सबसे हैरान करने वाली बात? हम ये तब समझते हैं जब कॉलेज हाथों से फिसलने लगता है।

Conclusion

"कॉलेज सिर्फ एक फेज़ नहीं होता, बल्कि वो ब्लूप्रिंट होता है जो हमें धीरे-धीरे आकार देता है। यहीं वो दोस्तियाँ बनती हैं जो हमें संभालती हैं, वो असफलताएँ मिलती हैं जो हमें मजबूत बनाती हैं, और वो 'firsts' होते हैं जो ज़िंदगी भर साथ रहते हैं।" शायद इसलिए लोग कहते हैं

-

**"चार साल की पढ़ाई शायद भूल भी जाए,
पर उन चार सालों की यादें कभी नहीं भूलती।"**

SHOULD AI HAVE A MORAL CODE?

Exploring the Need for Digital Ethics

— Kashish Patidar (CSE-AIML) 2nd Year

“Your day begins with a machine waking you up, an app suggesting your diet, tracking your Google Maps to avoid traffic, and scrolling endlessly through a feed curated precisely for you. Without realising it, you’ve already made a dozen AI-assisted choices - before even reaching college.”

In a world quietly steered by algorithms, one question rises above all -
“Who decides right or wrong in the digital era?”

To answer that, we must first understand what AI truly is and how deeply it has woven itself into our everyday lives.

From Dawn Till Dusk: AI And Its Silent Influence

Artificial Intelligence isn’t a glowing robot or a sci-fi villain; it’s a system that learns from data and makes decisions at a scale no human ever could.

Have you ever argued with someone only to realise your thoughts echo the same posts and reels your feed repeatedly showed you?

Your feed isn’t random, AI studies what you watch and when you watch, then builds a personalised world around you. It even decides what and how news lands on our screen and what opinion we are likely to form. AI merged itself into our everyday life without us realising. And what makes AI so powerful is not just what it can do, but **how invisibly it does it.**

And between human judgment and machine guidance, a new debate becomes unavoidable.

Should AI Have a Moral Code?

Remember the movie - **Robot**, Chitti tries to save a girl from a fire but ends up harming her because he calculates “rescue” mathematically, not morally. He possessed intelligence, velocity and power, but **no understanding of emotion, consent or consequence.**

The scene was a reminder of what happens when efficiency replaces empathy.

The Unknown Dark Side of Smart Machines: AI's Moral Blind Spots

That movie could be fictional, but today, the real world is whispering the same warning.

❖ **A Loan Denied Because of a Pattern, Not a Person**

A major U.S. bank once faced backlash when its AI gave women lower credit limits than men with the same financial history. The machine wasn't biased on purpose, it simply learned old prejudices and repeated them. But the consequences were real and inhuman.

❖ **A Life Shaken by a Wrong Face Match**

In Michigan, a man was arrested in front of his children because a facial-recognition system picked the wrong face. One faulty match and an innocent father lived a nightmare he didn't deserve.

❖ **Dreams Buried by a Silent Filter**

Across countries, AI screens scholarship and welfare forms. One biased assumption, one flawed model and thousands of deserving students or families are marked "ineligible" never knowing a machine closed the door on their future.

These aren't "tech glitches."

They're reminders that when smart systems fail, humans bleed.

Code vs. Conscience: What Should Machines Follow?

Machines don't feel fear, guilt, or responsibility; they can calculate the fastest rescue route, but it cannot understand whose life choices will be altered by a single wrong prediction.

Algorithms follow patterns.

Humans follow principles.

Building Ethics for a Mind That Isn't Human: Who Shapes AI, and How?

If machines can't feel right or wrong, the weight of morality rests entirely on human shoulders. And it doesn't only mean coders behind screens.

Ethical AI means three pillars:

1. **Engineers** who choose fair, diverse data instead of convenient or biased datasets.
2. **Policymakers** who create strict guardrails that prioritise public safety and accountability.
3. **A society** that demands transparency, questions decisions, and refuses blind trust.

It begins with selecting data that accurately represents people, not just conveniently. It means testing models not just for accuracy but for how they behave in messy, unpredictable human situations. It requires building systems that can explain why a decision was made, not just what.

A moral machine isn't accidental.

It is built layer by layer through intention and oversight.

The Ethical AI of My Vision

Creating Ethical AI requires more than programmers; it involves everyone. Users who raise concerns when things seem unjust, developers who scrutinise the data they rely on, policymakers who prioritise people and organisations that opt for accountability over easy fixes.

From my perspective, AI defends and secures our privacy, acknowledges our diversity, clarifies its decisions and views each individual as more than data points. It evolves into a collective ethical obligation.

CONCLUSION

The destiny of AI will not hinge on the level of machine intelligence attained. In a conscientious way humans decide to steer it. Ethical AI is a mirror reflecting the kind of society we are building.

Because intelligence without conscience is just computation.

But intelligence with ethics becomes progress.

So pause and ask yourself -

“If AI is becoming the brain of tomorrow’s world, are we prepared to become its moral compass today?”

OUR FIRST HACKATHON:

~Suyash Mahajan (CSE-DS) 1st Year

Joining college felt like entering a new world, and before we could even settle into our first-year routine, we were told about our first-ever hackathon. For most of us, the word itself sounded big—exciting, but also a little scary. Students who were interested were asked to form teams, and that’s where the real chaos began.

Everyone started approaching the smartest students first. Team leaders with strong communication skills quickly gathered the best coders and presenters. And then there were teams like ours—new, unsure, still figuring out who knew what. Team formation itself felt like a competition. I had hoped to form a team with my close friends because I wanted us to grow together from day one. But things didn’t go as planned, and I couldn’t form a team. Luckily, a few batchmates offered me a spot in theirs, and that became the beginning of a new bond.

The preparation phase taught us more than any class could. We debated team names, created PPTs, divided tasks, argued, agreed, and scheduled endless late-evening meetings. Being new to all this, we faced plenty of problems—coordination issues, idea clashes, and the pressure of doing something meaningful. But somewhere in the chaos, we learned what teamwork actually feels like. Our leader slowly discovered his leadership style, and we figured out how to support each other.

Finally, the hackathon day arrived. We entered the hall nervous but excited. We presented our idea confidently, the judges listened, smiled, and we walked out feeling proud. For a moment, we believed we might get selected. But destiny had different plans—the problem statement we chose already had 500 similar submissions.

Still, we left with something more valuable than a certificate:

The lesson that in college, success matters—but the journey, teamwork, and growth matter even more.

ACHIEVEMENTS

Dr. Jitendra Agrawal, Director and Associate Professor at the School of Information Technology, Rajiv Gandhi Proudhyogiki Vishwavidyalaya, Bhopal, has been appointed as the Vice Chair of the IEEE Madhya Pradesh Section. This prestigious appointment reflects his significant contributions to the field of technology, academic leadership, and professional development within the IEEE community. His role is expected to further strengthen innovation, collaboration, and technical excellence across the region.

Dr Varsha Sharma's R&D Project:

"Design and Implementation of a System to Monitor and Control the Polyhouse Environment using Artificial Intelligence and IoT" was funded by M.P Council of Science & Technology with a sanction amount of Rs. Eight Lakhs on 31/03/2025.

Dr. Pankaj Pandey completed his Ph.D. with the thesis titled "An Efficient Framework for Phishing Detection System Based on Machine Learning," under the supervision of Dr. Nishchol Mishra, and is currently serving as Assistant Professor at Symbiosis University of Applied Sciences, Indore.

Shilpy Kaur completed her M.Tech in Computer Technology and Applications from SOIT, RGPV, in 2013 and is currently pursuing a PhD at IIT Indore, following her qualification for the UGC-NET (JRF).

ACHIEVEMENTS

Dr Pankaj Pandey, Assistant Professor, Symbiosis University of Applied Sciences Indore, is pursuing a PhD titled "An Efficient Framework for Phishing Detection System based on Machine Learning".

Ms. Huma Gupta has been awarded the Ph.D. in Information Technology by RGPV, Bhopal, for her research on IoT intrusion detection using soft computing techniques, completed under the guidance of Dr. Sanjeev Sharma and Dr. Sanjay Agrawal.

Dr. Varsha Sharma is leading an R&D project titled "Design and Implementation of a System to Monitor and Control the Polyhouse Environment using Artificial Intelligence and IoT," funded by the M.P. Council of Science & Technology, with a sanction amount of ₹8 lakh (sanctioned on 31 March 2025).

ACHIEVEMENTS

Soumya Singh, a third-year CSE (Data Science) student, achieved India Rank 4 in the U-18 National Snooker Championship (2021), Rank 5 in the U-21 National Billiards Championship (2025), and Rank 6 in the U-21 National Snooker Championship (2025), and represented India at the International Heyball Open Championship 2025.

Aradhya Joshi, a dedicated Computer Science enthusiast specialising in AI & ML, is recognised as an NPTEL Superstar and Domain Scholar, with 20+ certifications, multiple Star distinctions, research publications in Machine Learning, and hands-on industry experience through an IIT Ropar-NPTEL Full-Stack Development internship

Suryanshi Kushwaha has completed 12-13 NPTEL courses and earned recognition as an NPTEL Enthusiast, Champion, and Discipline Star. She secured a Top 1% rank in Design Thinking by IIT Madras, scored 90% in Business Communication Essentials by IIM Bangalore, and won a Silver Medal in Deep Learning by IIT Ropar. Her achievements led to selection at Jaro Education among 2 candidates from 600+ applicants and sole selection at Appointy for an Internship with PPO. She has also contributed actively to campus life through Media Cell SOIT, Google Developer Student Club, and E-Cell RGPV

DEAR STUDENTS

By Tuhin Shukla

You arrived here carrying dreams—some loud, some quiet,
some clear as sunrise, some still searching for their shape.
And somewhere between classrooms, deadlines, friendships,
and the gentle chaos of growing up,
You learned that learning is not just about marks—
it is about becoming.

In the worlds of Business Systems, AI, and Data,
You are not just studying technologies—
You are learning to speak the language of tomorrow.
Every model you build, every pattern you uncover,
every line of code you write
is a small whisper of the future you are creating.

Remember this, always:

You are allowed to take your time.

You are allowed to make mistakes.

You are allowed to rise slowly, beautifully,
in your own rhythm.

Some days you will feel unstoppable—
as if the whole world is made of possibilities.

And some days you will feel lost—
as if nothing you do is good enough.

Both days matter.

Both days are part of your story.

In moments of doubt, look inward—

You will find resilience you didn't know you had.

In moments of success, look around—

You will see people cheering for you more than you realize.

And as you walk forward, step by step,

May you carry three gentle truths with you:

Let curiosity open doors you didn't know existed.

Let compassion guide every solution you build.

Let courage help you rewrite your own limits.

You are more than students—

You are thinkers, creators, questioners, and dreamers.

You are the bridge between imagination and impact.

You are the quiet hope of a better, wiser, kinder world.

As you turn the pages of this magazine,

may you see not just achievements—

but reflections of your own possibility.

Shine in your own way.

Grow at your own pace.

And remember:

The world is waiting for the brilliance only you can bring.

FRIENDSHIPS, FAILURES & FIRSTS: The Real College Story

~Aahana Dangi (CSBS) 1st Year

In her imaginary multiverse, Kiara never thought her college life would be like this. To her college was supposed to be like a Bollywood movie – new freedom, new friends, new stories, a handsome guy, violins playing, drama, love and what not, but nobody told her how heavy “firsts” can feel when they actually arrive.

The very first introduction, the first lecture, the first fake laugh for a joke you don’t understand, so that you don’t look clueless, the first separation from parents, family and school friends who promised to stay for a lifetime.

But all the ‘firsts’ are not so bad; there is also the first friend you make without realising. For Kiara, it was Rhea, her roommate, her batchmate and ultimately the first real connection she made in college. They experienced college traumas, most embarrassing experiences, watched K-dramas and Harry Potter together and shared secrets not just “I like him” types but also “I cried last night” ones.

Aaditya Chouhan

Eventually, Kiara made her dream ‘Zindagi Na Milegi Dobara’ friend circle. They laughed, lived, enjoyed and cried too after results and heartbreaks. But college is not just about finding people, it’s about losing them too...

The first failure hit Kiara badly, she got a ‘D’ in her surprise test. Everyone looked tough, casual and chill. However, it wasn’t casual for Kiara, the girl who met everyone’s expectations, who always earned good grades was suddenly losing herself all over.

By end sems, she started feeling left out. Group projects that made her question why she was the only one adjusting and apologizing. Friendships do not end loudly, sometimes they just fade, undone by misunderstandings and unsaid words. Not only she lost connections in college but with her school friends too. It wasn’t anybody’s fault, they just got busy in their own lives.

That’s how college failure looks like – not just in exams, but in people too.

Then came another first, a boy named Aarav, someone from her club. He wasn’t the over-extrovert, jolly, always ready to socialize type, but a sensible friend Kiara could confide in easily without any judgements or so-called motivational speeches. A nice real connection who taught her – “You don’t have to be perfect to fit in here. You just have to be you.”

Slowly, college became less scary. Not only because she had Rhea and Aarav now, but also because she had herself. Even though things weren’t the same, they weren’t broken either.

Kiara studied harder, she participated, stepped out of her comfort zone, became more confident, started wearing a charming smile in her chaotic life.

Days passed, semesters passed, years passed. Memories stayed. On the last day of college, as Kiara walked out of the college gate – the same gate she walked into with fear and hope of starting something new – and that’s when she realised –

“College is not about perfect friendships and connections. It’s about every first laugh, first crush, first heartbreak, first panic attack, first failure, first win, first person who helped you when you broke and the first time you discovered you are stronger than you thought.”

Maybe it wasn’t the classic Karan Johar film – but it was the movie directed by her, a script written by her.....

THE ALGORITHMIC CONSCIENCE:

Why Your Moral Code is the Next Unicorn Skill

— Prakash Raj Gupta (CSE-AIML) 2nd Year

The Age of Agents... The Authenticity Crisis... Skin in the Game... Sridhar Vembu's Warning... The India Story... Trust as a Moat...

We are standing at the edge of a new cliff. For the last two years, we've been obsessed with what AI can do. We celebrated when it wrote our code, designed our logos, and passed our exams. The question is no longer "Can AI do it?"

The question is: "Who is responsible when it breaks?"

We have officially entered the era of "Agentic AI", autonomous digital employees that can negotiate, sell, and execute decisions on their own. It's the ultimate power upgrade. But as we learned from every industrial revolution in history: power without protocol is just chaos. This is the new "founder's paradox." And solving it isn't just a philosophy homework; it is the single biggest business opportunity for Indian engineers in 2026.

The Ghost in the Machine: Reliability Gap

But what does this chaos actually look like in the real world?

It looks like the "Black Box" problem. Recent industry reports suggest that as AI models get larger, their hallucinations are becoming harder to detect. We are seeing a flood of synthetic content that looks perfect on the surface but lacks ground truth. The "faithful servant" has become a chaotic master, capable of generating millions of lines of code or content without understanding a word of it.

So, as a student founder, do you take the easy route?

The temptation is real. You could use an Agentic AI to automate your entire customer support or content creation. It's cheap, it's fast, and it works. But this creates a hidden cost which is The Trust Deficit. In an internet flooded with automated noise and synthetic data, human connection is becoming the rarest resource.

THE RISE OF TEEN BANKING:

How Fintech is Changing Money for Gen Z

Jeet Hemani (CSE-AIML) 3rd Year

There is a quiet revolution happening in India—not in classrooms or playgrounds, but in the way teenagers handle money. What once began with pocket money in steel piggy banks has now shifted to digital wallets, UPI handles, and teen-friendly banking apps. Gen Z, born into a world of smartphones and instant connectivity, is redefining how money is earned, saved, and spent. And powering this shift is the fast-growing fintech ecosystem of India.

Digital Payments: A Revolution in Every Pocket

Just a decade ago, paying someone meant cash transactions, standing in bank queues, or writing cheques. Today, a teenager can split a pizza bill, recharge a phone, and shop online—all within seconds. UPI has democratised payments in a way India has never seen before.

Digital payments didn't just make transactions faster; they made them borderless. Whether it's sending money from Delhi to Indore or paying a local street vendor, the process has become seamless. For teens, who crave speed and convenience, this change feels natural. The friction of traditional banking is gone, replaced by a tap, a scan, or a swipe.

Why It's Cheaper and Easier for Gen Z

Gen Z is the first generation to grow up with payment freedom—no minimum balance requirements, no hidden charges, and no paperwork. Apps like PhonePe and Paytm have played a huge role in this transformation.

- They removed the cost barriers by making UPI transfers free.
- They removed the technological barriers by keeping the interface simple.
- And they removed the fear barrier by building trust through instant refunds, transaction histories, and easy support.

For teens, these apps feel less like banking tools and more like lifestyle apps. Paying someone is as easy as sending a message. Buying a metro ticket, booking a movie, paying for a snack at the canteen—everything is instant and cashless. This comfort is shaping a generation that prefers digital over physical, speed over paperwork, and transparency over complicated banking rules.

The Backbone of Modern Payments: Razorpay & Escrow Systems

While consumer-facing apps get most of the attention, the real magic often happens behind the scenes. Companies like Razorpay, Cashfree, and other payment gateways have quietly built the backbone of India's fintech infrastructure.

- They make online transactions possible for businesses by offering secure payment gateways.
- They ensure that money reaches the right place without delays.
- Their escrow systems protect both buyers and sellers by holding funds safely until a transaction is verified.

For example, when a teen shops from a small Instagram store or books a class from an online tutor, chances are the payment is being processed by Razorpay. The business receives the payment instantly, while the customer gets a secure way to transact without worrying about fraud. This trust has enabled thousands of small online businesses to flourish—many of them run by teens themselves.

Teen Banking Apps: A New Era of Financial Independence

Adding to the momentum are teen-focused apps like Fyp, Junio, Akudo (earlier), and family banking services from major banks. These apps offer prepaid cards, expense tracking, and easy parental controls. For the first time, teens are learning financial responsibility hands-on—how to save, how to budget, how to track spending. This early exposure creates a generation that is financially smarter, more aware, and more digitally empowered.

Gen Z: More Than Users—They're the Future of Fintech

Teenagers are not just using fintech; they're influencing it. Their expectations—speed, clarity, minimal steps, low costs—are pushing companies to innovate constantly. As digital payments and fintech tools grow, so will their role in shaping India's financial future.

From UPI to escrow payments, from PhonePe to Razorpay, the ecosystem is evolving fast. And at the center of this transformation is Gen Z—a group that is redefining not only how India pays, but how India thinks about money.

CAN CITIES BREATHE AGAIN?

AI and Tech Solutions for Urban Pollution

~Suryanshi Kushwaha (CSE-AIML) 4th Year

A few months ago, I was stuck in traffic on a winter morning, watching the skyline disappear behind a thick grey haze. The buildings I saw every day looked blurred, almost ghostly. My phone's weather app didn't show the usual "sunny" or "cloudy." Instead, it displayed a blunt message: Unhealthy Air Quality. In that moment, sitting in the middle of honking cars and smudged horizons, I caught myself wondering: Will our cities ever breathe clean again? This question has followed me since—sometimes as a worry, sometimes as hope. And somewhere in that search for hope, I realised that the answer might come from a space we often overlook: technology, especially AI.

Technology: The Unexpected Oxygen Mask

Growing up, I thought technology mainly made life faster. Faster phones, faster payments, faster everything. But recently, I've seen how technology, especially artificial intelligence, is shifting from convenience to survival.

Urban pollution is no longer just a topic for environmentalists. It has become personal. It affects how we breathe, how we live, how long we live. And that's exactly where AI is starting to change the narrative.

My First Encounter with AI-Powered Pollution Tracking

I remember downloading an air-quality app during peak pollution season. It didn't just show a number; it explained why the number was rising, which industries were contributing, how wind direction was affecting it, and when the air would improve.

That was my first real introduction to AI-driven prediction models—systems that analyse millions of data points from sensors, satellites, and public reports to create accurate, real-time forecasts.

It felt like having an environmental expert in my pocket.

The New Guardians of the Air: Sensors, Satellites, and AI

Cities today are quietly installing dense networks of pollution sensors. These tiny devices sit on lampposts, rooftops, metro pillars, and even school buildings. They continuously track pollutants like PM2.5, NO2, and carbon monoxide.

What impressed me most is that these sensors don't just collect data—they learn.

AI systems identify patterns that humans would easily miss.

For example:

- What time pollution peaks in a neighborhood
- Which intersections trap the most emissions
- How temperature changes affect pollution levels
- Which days factories contribute more pollutants

With this information, city planners can actually take action—reroute traffic, restrict industrial activity, redesign road systems, or target specific areas for tree plantations.

Smart Traffic: When AI Becomes the City's Lungs

One of the biggest contributors to urban pollution is traffic. We've all sat in those jams where cars are barely moving but emissions are constantly rising.

Some cities are now using AI-driven traffic systems that adjust signals based on real-time congestion. The first time I saw one in action was during a trip to Bengaluru. I noticed the signals changing dynamically—not following a fixed pattern. My friend explained it was part of their smart signal system.

Traffic moved smoother. Honking dropped.

And surprisingly, the air smelled... less toxic.

These systems might seem small, but they reduce idle time and emissions significantly. Sometimes, the simplest tech leads to the biggest breath of relief.

Electric Mobility and the Tech Shift

A close friend of mine recently switched to an electric scooter. When I asked why, he said something that stayed with me:

“It feels good knowing I'm not adding smoke to the sky we all breathe.”

Electric vehicles, AI-optimized charging stations, and battery management systems are transforming urban mobility. And while EVs alone can't solve everything, they are an important piece of the puzzle.

Nature Meets Technology: A Powerful Collaboration

One of the most surprising developments for me has been how technology is helping nature fight pollution. AI tools now help cities:

- Identify where tree cover is lowest
- Predict where green zones would reduce PM levels the most
- Track the health of existing trees through satellite imaging

It's like nature and AI have finally decided to work together.

So, Can Cities Breathe Again?

If you'd asked me this question a few years ago, my answer would have been hesitant. Pollution felt too big, too complex, too permanent.

But today, after seeing what intelligent systems can do—after watching sensors, algorithms, electric mobility, and green tech slowly take root—I feel something I haven't felt in a while: **optimism.**

Urban pollution won't disappear overnight.

But for the first time, we have tools that don't just measure the problem—they help solve it.

And maybe, someday soon, we'll look up at the sky and see a horizon that isn't blurred by haze but bright with possibility.

THE RISE OF TEEN BANKING:

How Fintech is Changing Money for Gen Z

Raag Dixit (CSE-DS) 1st Year

The rise of teen banking is reshaping how Gen Z thinks about money, and fintech is at the center of this change. Instead of queuing at branches or filling out long forms, teenagers now open accounts, save, invest, and pay friends using a screen they already live on: their smartphones. This shift is not just about convenience; it is about giving a digital-first generation control, confidence, and earlier access to the financial world.

•From piggy banks to teen banking apps

For earlier generations, “learning money” often meant a physical piggy bank, a passbook, or visiting a bank with parents. Gen Z, born into a world of UPI, QR codes, and instant payments, is experiencing something very different. Teen-focused accounts, prepaid cards, and app-based wallets give them bank-like features without requiring a full adult account. These products typically come with spending limits, parental controls, and simple onboarding, making it safer and more approachable for first-time users.

Many of these teen banking solutions are built by fintech startups rather than traditional banks. They use clean interfaces, instant notifications, and gamified rewards to keep teens engaged while they learn how money flows in and out. As a result, financial literacy starts much earlier, and handling money feels like managing any other app-based activity, such as social media or gaming.

•How fintech is connected with Gen Z

Gen Z is the first true “digital native” generation, so they expect every service to be mobile-first, fast, and personalized. Fintech platforms match this expectation by offering real-time balances, instant payments, and smooth user experiences with minimal paperwork. A teen can split a bill, pay a subscription, or send money to a friend in seconds, often with just a few taps. This immediacy trains them to see money as something dynamic, not static.

Beyond speed, personalization is a huge factor.

Fintech apps use data to offer customized insights like spending breakdowns, smart alerts, and AI-driven tips, which help teens understand their habits instead of just showing numbers. Some apps even turn saving into a challenge with streaks, badges, and goals, which fits naturally with the way Gen Z interacts with games and social platforms. This combination of fun and function keeps them learning without feeling like they are in a classroom.

• Financial literacy in your pocket

One of the most powerful impacts of teen banking is in financial education. Traditionally, money lessons were limited to family conversations or school, and often came late. Now, fintech products include built-in tools: visual budgets, goal trackers, bite-sized lessons, and simulations that show the impact of saving, interest, or debt over time. Teens can see, in real time, how small daily decisions add up at the end of the month.

This practical, hands-on learning makes concepts like budgeting, emergency funds, or investing feel real instead of theoretical. Many platforms also introduce features such as round-up savings, basic investment options, or linked educational content that explains risk and reward. Over time, this can create a generation that is more comfortable with long-term planning, investing early, and avoiding common money traps like overspending on credit.

• New norms: cashless, social, and conscious

Fintech is also changing the culture around money for Gen Z. Cash is less common; digital payments, UPI handles, and virtual cards are becoming the norm. Money is more “social” too—peer-to-peer transfers, shared expense tracking, and group saving goals are widely used. Talking about money is no longer taboo; friends compare apps, rewards, and investment screenshots much like they share playlists or memes.

At the same time, Gen Z is unusually value-driven. Many care about sustainability, ethics, and transparency, and they expect their financial tools to reflect that. Some fintech platforms respond by showing carbon impact of spending, offering options to support social causes, or providing investment choices aligned with environmental or social values. Teen banking, therefore, is not just teaching “how to make money” but also “what money should stand for.”

• Challenges and what comes next

Despite the opportunities, teen banking through fintech brings challenges. Data privacy, digital addiction, overspending on instant payments, and exposure to risky investments are real concerns. Parents, regulators, and fintech companies need to work together to set safeguards such as clear consent, spending limits, age-appropriate products, and strong security. Digital literacy must develop alongside financial literacy so teens can recognize scams, protect passwords, and understand the value of their personal data.

Looking ahead, teen banking is likely to become even more integrated into everyday life: smarter AI advisors, seamless links between earning (through gigs or content creation) and saving, and stronger school–fintech collaborations for education. For Gen Z, banking will not be a separate, occasional chore—it will be an invisible, always-available layer woven into the apps and platforms they already use. The rise of teen banking shows how fintech is not just changing money for Gen Z; it is helping define how the next generation will earn, spend, save, and shape the financial systems of the future.

FROM OUR CLASSROOM TO THE WORLD

Mesasages from the Almuni
Your Experience at RGPV

My experience at RGPV was enriching and memorable. I started GDSC SOIT to create a better tech culture on campus and organised many fun events. Made lifelong friends, explored diverse subjects, and grew academically and personally with supportive faculty and vibrant campus life!

Sumit Yadav

The academic environment encouraged me to strengthen my technical foundations, while projects and lab work helped me gain practical skills. Interacting with diverse peers broadened my perspective and improved my communication and teamwork abilities. Participating in college events and seminars further boosted my confidence. Overall, RGPV provided me with a supportive atmosphere to develop both academically and personally.

Vansh Saxena

My experience at RGPV was meaningful and growth-oriented. The university helped me build strong technical skills, work on practical projects, and develop confidence through continuous learning and teamwork.

Sanskriti Gupta

FROM OUR CLASSROOM TO THE WORLD

Mesasages from the Almuni

**How did RGPV help you gain an edge over
others in the job market?**

Pursuing my B.Tech in CSE at RGPV's School of Information Technology has been transformative. The rigorous curriculum and supportive faculty helped me build a strong technical foundation.

Gyanendra Prajapati

RGPV equipped me with a solid technical base and practical exposure that helped me stand out in the job market. The focus on real-world projects, coding skills, and problem-solving strengthened my confidence. Even though I later chose the animal welfare field, the discipline, analytical thinking, and management skills learned in engineering helped me excel in my professional journey and adapt quickly in any work environment

Arpit Sahu

GDG SOIT RGPV

GDG, SOIT (Google Developer Groups) is a dynamic, community-driven technical club that focuses on skill development and practical learning in modern technologies. The club aims to empower students by providing hands-on exposure to tools, platforms, and frameworks widely used in the industry, particularly those associated with Google technologies. Through coding workshops, hackathons, development sessions, technical talks, and peer-learning activities, GDG promotes problem-solving and innovation.

The club encourages students to build real-world projects, collaborate with like-minded peers, and stay updated with current technological advancements. GDG, SOIT fosters a strong developer culture within the department, motivating students to learn continuously, experiment boldly, and prepare themselves for future opportunities in the tech industry.

IEEE SOIT RGPV

IEEE, SOIT is a student chapter that actively promotes innovation, research orientation, and professional excellence among students at the School of Information Technology. Being a student chapter of the globally recognized IEEE organization, the club provides exposure to international technical standards and emerging technological trends. Through a wide range of activities such as technical workshops, expert lectures, paper presentations, coding events, and hands-on projects, IEEE, SOIT encourages students to think critically and apply theoretical knowledge to real-world problems.

The club also plays a vital role in nurturing leadership and teamwork by involving students in organizing events and collaborative initiatives. By bridging the gap between academia and industry, IEEE prepares students to face technological challenges with confidence and competence while fostering a strong culture of learning and innovation.

PERSONA SOIT RGPV

PERSONA, SOIT is the personality development club dedicated to shaping confident, expressive, and well-rounded individuals. The club serves as a creative platform where students can explore and showcase their talents through competitions and interactive sessions like group discussions, debates, along with fun-filled activities. PERSONA focuses not only on enhancing communication skills but also on building leadership qualities and developing self-confidence. By encouraging participation and collaboration, the club helps students break inhibitions and discover their potential beyond academics.

PERSONA plays a crucial role in strengthening peer bonding and creating a lively campus environment, ensuring that students grow both personally and socially.

THE MEDIA CELL

The Media Cell of the School of Information Technology, RGPV manages official digital communication and content across institutional platforms. It is responsible for curating posts, covering events, and ensuring accurate and consistent dissemination of academic and institutional updates.

AI AS THE NEW FARMHAND

The Future of Precision Agriculture

-Zaara Saiyyed (CSE-DS) 1st Year

For centuries, the image of a “farmhand”—the helper in the field—has been a person with a shovel, working under the scorching sun, relying on intuition and physical labor. But in 2025, the farmhand has changed. It no longer has tired muscles; instead, it has sensors, drones, and neural networks.

We are standing at the brink of a revolution known as Precision Agriculture, where Artificial Intelligence (AI) acts as the new, tireless farmhand, transforming farming from a game of chance into a science of exactness. As the father of the Green Revolution, Norman Borlaug, once envisioned:

“You can’t build a peaceful world on empty stomachs and human misery.”

Today, AI is the tool that ensures those stomachs stay full by maximizing every inch of soil.

The Rise of the Digital Farmhand

A traditional farmhand helps the farmer look after the crops. Similarly, AI helps the farmer “see” and “understand” the field in ways human eyes cannot. This is the core of Precision Agriculture—giving the plants exactly what they need, exactly when they need it.

In the past, a farmer would spray pesticides over an entire field because a few plants had bugs. This was inefficient and harmful. Today, AI-powered cameras (Computer Vision) attached to tractors can identify a single weed among thousands of healthy crops and spray only that specific weed. This “Digital Farmhand” saves money and protects the environment.

From Intuition to Data-Driven Decisions

Farming has traditionally been about “gut feeling.” A farmer would look at the sky and guess when to water.

Now, the AI farmhand uses IoT (Internet of Things) sensors buried in the soil. These sensors talk to the AI, saying, “The moisture level at the north corner has dropped by 10%.” The AI then automatically triggers the irrigation system for just that area.

This level of precision means we are no longer just farming land; we are farming data.

Predicting the Unpredictable

The biggest enemy of the farmer has always been the weather. While we cannot control the rain, AI can predict it with terrifying accuracy. By analyzing historical weather patterns and satellite data, AI models advise farmers on the exact best day to sow seeds or harvest crops to avoid damage.

“The farmer of the future will not just be a man with a plow, but a manager of technology.”

Conclusion: The Role of IT Engineers

As students of Information Technology, we often think our jobs are limited to air-conditioned rooms and server rooms. However, the future fields of India are waiting for our code. The “New Farmhand” needs to be programmed, maintained, and improved.

AI is not replacing the farmer; it is empowering them. You are the one behind the shoulders and the circuits. The future of agriculture is here, and it is written in Python.

AI AS THE NEW FARMHAND

~ Lakshya Patel (CSE-DS) 3rd Year

Oh my dear cup,
You're broke.
He was broke too,
shattered into pieces.
Feelings became trash,
like you.
Wait—
not like you.
Why are you lying on this ground?
Did the love of your life leave you,
or is it just me,
making stories from silence?
Maybe the cigarette butt beside you adored you,
maybe it stayed
when no one else did.
Looked like you lived your pride,
and the prejudice of soil.
Were you proud, or just pretending?
Pretending to be a friend—
or are you just a foe?
Like you once lit up a home,
or maybe...
I'm just a fool,
dreaming on a street full of silence
that forgets too fast.

मेरा सफर

~Hritika Mansure (CSE-AIML) 1st Year

9 साल की थी, जब छोड़ा था घर,
तभी शुरू हुआ जिंदगी का सफर।
नन्हें से कदम थे, पर जब बढ़ा था,
बचपन ने शायद मुँह मोड़ा था।
दो माह के भीतर, वो नन्ही सी रात,
मैंने पहली बार किया हॉस्टल का स्वाद।
Mess का खाना, रोज़ की कहानी,
कभी वो गलती, कभी नादानी।
नहीं जानती थी कि क्या वो फैसला था मेरा,
कुछ अनजाना, न था कुछ सवेरा।
माँ की यादें, पापा की मुस्कान,
उन्हें दूर देखकर हर दिन आँखें भी लगीं।
School में जब अपने कदम लगाए,
दोस्तों के प्यार से डर को भगाए।
वहीं बदली मेरी सोच और दुनिया देखना है,
फिर से खुद को तराशना है, सीखने का मौका है।
College का वक्त आया, शहर बदला, नई पहचान,
घर फिर से छूटा, फिर नए-नए सवाल।
फिर Mess का खाना, जीवन आसान से लगता,
और फिर कितनों को सीख देने लगी, खुद को आगे बढ़ाना।
माँ की याद हर दिन साथ है,
पापा की हिम्मत मुझे बदलती है।
मुझसे दूर होकर माँ-पापा ने दर्द सहा होगा,
मुझे उड़ान देने का सपना उन्हें भी होगा।
हर College के लिए मैं तैयार हूँ,
जो कुछ पढ़ने सिखा, मेहनत नहीं बेकार हूँ।
घरवाली लड़की एक छोटी सी थी,
एक नई कहानी बनने चली।
दुनिया ने अब मेरी विद्या बन गई।

WHERE HOPE BEGINS

~Ananya Mishra (CSBS) 4th Year

Every tomorrow arrives with open hands,
ready to shape our dreams in gentle strands.

It carries the quiet courage
we forget we have,
reminding us that even small steps
can lead us toward the light.

In its unfolding hours,
we find pieces of ourselves

we didn't know were waiting-
steady, bright, becoming whole again.

A new light rises where the dark once stayed,
a softer path appears from hopes we've laid.

In steady moments, all our fears will fade,
as tomorrow brings the courage we've prayed.

A new path is unfolded to be travelled upon,
worries, tension and fear all gone.

It paints our dream in colours calm and clear,
reminding us that healing starts here.

Tomorrow comes with new hopes,
stairs to climb with wider scopes.

Thoughts to win every version of yours,
welcoming your dreams with open doors.

Tomorrow's touch is gentle, never loud,
it lifts our spirits when the world feels bowed.

And in its light, we stand a little proud,
finding our place beneath the sky unclouded.

"A tender reflection on how each new tomorrow brings gentle hope, quiet strength, and the promise of a softer path ahead."

मुस्कुराहट

~अनिल सिंह (CSBS) 1st Year

जिसको देखकर खुश हो उसके लिये काफी है,
जिंदगी में हर जगह तो जाने के लिये मुस्कुराहट काफी है।
मैं अपनी मुस्कुराहट को गवाना नहीं चाहता।
कोई ऐसी मुस्कुराहट पैदा करना नहीं चाहता।
जिस दौलत में न हो खुशी, संतुष्टि,
ऐसी दौलत में कमाना नहीं चाहता।
ईश्वर उसे दे जो जिसकी मेहनत सच्ची,
सच्ची हो।
जिसका मुस्कुराता चेहरा और व्यवहार अच्छा हो।

WHISPERS IN THE HALLS

~Deepanshi Raghuwanshi (CSE-DS) 1st Year

My mind is a city filled with streets I've never walked,
alleys I pass in daylight but avoid when night falls.

Shadows slip along the walls, curling around
the fragile shape of my doubt.
Fears fester quietly—
not monstrous, just persistent—
tightening in my chest until breath feels borrowed,
until the world narrows to a single, trembling moment.

But in the hush between thoughts
a small spark lifts its head.
Not a blaze—just a pulse, steady enough to follow,
warm enough to keep me from turning back.

And so I rise.
Slowly.
Softly.
Layer by layer.
I am a palimpsest—
stories scraped and rewritten,
mistakes crossed out,
beginnings waiting beneath the old ink.

I am still becoming.
And for now, that is enough.

NOT A REJECTION, BUT A NEW BEGINNING

~Mantra Gupta (CSE-DS) 1st Year

Sometimes life brings us to moments where we give everything—our confidence, our preparation, our passion—and yet the results do not match our expectations. There are days when we pour our heart out on the stage, speak with honesty and enthusiasm... and still, when the results list comes out, our name is missing. And yes, it hurts. But these very moments, these very setbacks—shape the real identity of a student.

Not Failure, but a Change of Direction

Destiny doesn't always move in straight lines. Some paths curve unexpectedly, and some outcomes are beyond our control. But one truth remains— Performances never lose. Only competitions do. Your effort is still yours. Your confidence is still yours. Your voice remains just as powerful. Every attempt, every stage, every challenge is preparing you for what comes next.

The Role of Setbacks in Student Life

Student life is not defined only by exams, certificates, or result sheets. It is a journey of growth, learning, and self-discovery. The students who rise after falling, who try again after failing—they become the future leaders, creators, innovators, and changemakers.

Remember—

Easy victories don't create greatness; difficult moments do.

A Message to Move Forward

Never let one result limit your dreams. The stage will return, opportunities will come again, and your talent—if you continue to nurture it—will shine so brightly that no one will be able to overlook it.

“If your goal lies ahead, never turn away from the path.

If you've dreamt a dream, never let it fade.

Success will greet you at every step,

But to touch the stars, never leave the ground beneath your feet.”

This article is dedicated to every student who shows courage before winning, and strength even after losing. These are the learners who become the future of our nation.

"THE UNHEARD ECHO"

~Kashish Patidar (CSE-AIML) 2nd Year

In a world full of noise,
it's an unheard echo that screams the choice.
Rolled in confusions and scars I hide,
I lean ahead into the woods - silent, dark and blind.
With every whistle of rustling leaves,
and the scary winds that the ground sweeps,
warnings buzzed - turn around and run,
No creep no crawl, even no footprints only fear growl.
My heart freezes, my chest still strives,
I stand with the ashes of the dreams I survived.
For moments I called but remained unheard - yet I dive within,
and through the haunted path, I swim.
From the darkness once I feared , now nothing to loose;
I wiped my tears clean and cradled my worn-out shoes.
I smiled and walked for a destination with no address,
Only a spark in eyes and mind with distress.

Unknown, unaware, yet unshaken-I rose alone,
in a thorny world that still whispers hope.
Now I carry a courage I never knew I had,
fighting or figuring my way through this no-man's-land.
But step by step, the darkness slowly faded,
and a world that once screamed my failures... quietly degraded.
And those who once carved their doubts into my skin,
now watch from the shadows, wishing for the fire I forged within.

मैं

~मृदुल कृष्ण गोस्वामी (CSBS) 1st Year

(i)

मिट जाए वो देश तो दुनिया खुशहाल हो जाए,
अगर ही पल उस धर्म के लोगों से खतरा सर पड़ जाए।
मिट जाए वो धर्म तो दुनिया कमाल हो जाए,
अगर ही पल उस जाति का खात्मा आ जाए।
झुक जाए जब सभी के सर,
तो हमारी दुनिया बेमिसाल हो जाए।
अगर ही पल मेरी ही जाती के भी भेद मेरी नज़रों में आ जाए,
उन सभी में यदि मेरे बोध सर्वत्र कहलाए फिर तो वाकई ये दुनिया आदर्श हो जाए।
अगर ही पल मेरे आई ये जमीन का विवाद मन को खा जाए,
यदि वो भी पूरी मेरी हो जाए
तो शायद और खुशी का वह शिखरत्व गहन।
मुझे भीतर ही भीतर निगलना खाना जाए।

(ii)

आज को अच्छे से जिये ये पल याद आएंगे,
आज को खून के 'पेश' से जिये ये बाद में आराम लाएंगे।
ये बात कब आएगी?
बढ़ते तापमान से धर पर जीवन खत्म हो जाने के बाद?
सारे पशु पक्षियों की जातियों के लुप्त हो जाने के बाद?
या जंगलों का पूर्ण रूप से मिटा देने के बाद?
या सारे ग्लेशियरों में जमी आखिरी बूँद तक पिघल देने के बाद?
या गहरे समुद्र के जीवों तक को शांत कर देने के बाद?
या गरीबों की चोट चोट कर मार डालने के बाद?
या फिर दूसरे कबीलों को मार गिराने के बाद....!
कब याद आएगी
क्या तुम्हारे मिट जाने के बाद!

मैं और श्री हरि !

~Omprakash Meena (CSE-DS) 3rd Year

ये सारे मेरे भाई हैं, तो कैसी ये लड़ाई है,
मार्ग मुझसे ना होगा भाईचारा या कड़ाई है,
दुर्योधन समझूं तो, सब राज्य उसी को दे दो,
एक मार्ग कौरव का पाप का मेरे सिख तुम दे दो,
गुरु भी मेरे हैं इसी रण में, कैसे ले लूँ उनका श्राप?
उनकी ही तो बादल हैं, हाथ मेरे हैं कमान,
उनकी ही तो बादल हैं, हाथ मेरे हैं कमान !!
संशय अर्जुन मन में व्याप्त..... हरे ! भगवान की ही लीला थी;
ये संशय मिटाने को, संसार को धर्म सिखलाने को,
मेरे भगवान की तो बस, श्री भगवद गीता कहनी थी !
दौनों ही भगवान की एक, सृष्टि इस मनुष्य को,
कैसे भी समझा सकते थे आज, भगवान प्राणी आप को !
हर एक मानव की अब, शत्रुता मुझे करती है,
बढ़ती मानव मेरी अब, दूरी खोज फूँकार करती है,
गौर से मेरा ध्यान करो, तुम अपनों से ही डरते हो,
वो अपनों से ही डरते हैं,
कौन न समझे बात ये मुझे,
ये कलयुग की कैसी धरती है ?
ये कलयुग की कैसी धरती है
(सुनो पार्थ (Me) : by Shree Krishna....)
विचार करो इस बात पे, क्या है मानव के हाथ में ?
अरे कर्म करो बस कर्म करो, श्री हरि हमेशा साथ में !
धर्म हेतु तू तेरे कर्म नहीं, कर्म समान हो समय अभी
जैसे रात होती कुछ समय हेतु,
जैसे चंद्र का कलंक सहन,
परंतु प्रकाश भी तो भोर हो देता,
तारोंगण भी भी मृग मर हो देता,
अंधकार अब देख प्रबल होगा,
कल कुछ नहीं, कल कलि होगा !
कल कुछ नहीं कल कलि होगा !!
(यहाँ "कल" शब्द का प्रयोग प्रथम में "कलयुग" के लिए
और दूसरी बार "आने वाले कल" के लिए किया गया है)

BETWEEN BELL RINGS

~Suryanshi Kushwaha (CSE-AIML) 4th Year

Between bell rings and busy halls,
Where footsteps echo dreams and falls,
We learn that life is more than marks—
It's hidden in the quiet sparks.

In stolen laughs and unplanned plans,
In friends who hold our shaking hands,
In nights that blur with coffee stains,
In little losses, tiny gains.

In crowded rooms we find our own,
A corner where we're gently known.
And every goodbye that feels too soon
Makes space for something new to bloom.
College ends, but its stories stay—
Like sunsets bottled from each day.
We leave, but carry in our chest
The place where we became our best.
Between bell rings, life softly taught
That growth is never sold or bought—
It's found in moments, raw and true,
Where we became a braver you.

TEA WITH THE DIRECTOR (CHAI K SAATH SAMVAD) ON BREWING THE IDEA OF

OUR ANNUAL COLLEGE MAGAZINE

Over a cup of tea, it feels fitting to speak about an idea that was also “brewed” quietly—an idea that eventually became our annual college magazine.

The thought began with a simple question: What happens to the stories we create every day on campus? The late-night preparations, the quiet academic breakthroughs, the creative sparks in classrooms, the cultural celebrations, and the voices that deserve to be heard—where do they all go? The annual magazine emerged as an answer to that question. It was envisioned not just as a publication, but as a living canvas of the college. A space where academics meet art, where ideas find expression, and where every student and faculty member can leave a mark. Unlike notices that fade and events that pass, the magazine was imagined as something timeless—a memory bound in pages. With the Director’s vision and encouragement, this idea evolved into a collective journey. It empowered students to think, write, design, and reflect. It encouraged departments to showcase innovation beyond syllabi and allowed the institution’s values to speak through creativity rather than formality.

Today, our annual magazine stands as more than a book—it is our voice, our archive, and our identity. Each edition captures a year of growth, thought, and transformation, inspiring those who read it and those who will someday contribute to it.

Just like this tea we shared, the magazine reminds us that meaningful ideas often begin with simple conversations.

SOIT, RGPV PATHWAY TO SUCCESS

At SOIT, we believe that the true power of technology lies not in its complexity but in its ability to solve human problems and create inclusive opportunities. We are more than just an academic department; we are a community dedicated to breaking down the barriers between technical expertise and real-world application.

Our mission is to ensure that every student leaves these halls not just with a degree, but with the confidence to navigate and shape a digital future that belongs to everyone. As we close this chapter, let us remember that the tools of tomorrow are only as effective as the minds that wield them with purpose. The journey of innovation never truly ends; it simply evolves with every new idea you choose to pursue.
